

A film review: *The Theory of Everything* (2014)

*The Theory of Everything* is a biographical drama film. It is based on the book *My Life with Stephen* by Jane Wilde Hawking. It was directed by James Marsh. It stars Eddie Redmayne as Stephen Hawking and Felicity Jones as his wife, Jane. The film has just won an Oscar this year for Best Actor (Eddie Redmayne).

The film is set in the United Kingdom in the 1960s so far. It was shot on location in Cambridge.

The film is about Stephen Hawking's life. He is a brilliant astrophysics student at Cambridge University. He meets Jane and they begin a relationship. While he is working on his thesis about the time, he is diagnosed with a degenerative disease. The doctor says that he will be able to live for two years. Despite of that, they marry and have three children. In the end, Stephen 's health is little by little getting worse and their relationship too.

I especially recommend it. It's the best film I have seen this year. It has romance, drama and it made me think about how to face life. Don't be lazy and go to see it at the cinema.
